Objective

My speciality is to drop in to any situation and quickly establish technical competency, regardless of the discipline involved. I thrive in a technical consultancy with a range of unusual and challenging clients. I would like to be able to apply this where I can have a high level of impact resulting in real change.

Experience

- **KIT digital**

Technical Architect

London, UK

01/2012 – Present

- **ioko**

Technical Lead, Senior Engineer, Systems Engineer

London, UK

03/2008 – 12/2011

KIT digital provides video on demand product development, ITIL managed services and technical consultancy/professional services to a range of clients, including Channel 4, BBC, AT&T, and Disney. KIT digital purchased ioko in April 2011 to strengthen their professional services and technical development arm.

- Currently working as the principle technical authority on several projects, mentoring teams of engineers for the successful delivery of high profile platforms. Involvement ranging from advising C level executives on technical strategy to tracing system calls
- Primary technical interface to clients, producing both high and low level designs, deep involvement in technical implementations, acting as the SME for a range of products (internal and external) and technologies
- Key account contact for multiple customers, instrumental in both client retention and account development, through thorough technical assurance
- Developed in-house skunkworks-style projects which have been adopted into the product development organization development, which form part of customer production systems
- In addition to technical roles, taken on commercial, pre-sales and marketing responsibilities - including representing KIT digital at IBC - the main conference for broadcasters, and participating in several extensive proposals in both an architectural and commercial role
- Knowledge of European, Middle Eastern and South East Asian video markets and working environments

Projects

- **TBA**

Technical Architect

Kuala Lumpur, Malaysia

Present

An upcoming Video on Demand project, working with the region's largest cellular telephony company to deliver premium content to existing subscribers. Current role as infrastructure architect, specialising in the development of automated deployment systems and platform content delivery strategy

- **Channel 4 Television Corporation**

Lead Infrastructure Architect

London, UK

2010 - 2012

Channel 4 is the UK's alternative public broadcaster. A heavy investor in technology, they aggressively target new devices, with a strategy underpinned by the use of public and private IaaS providers. Working as the primary infrastructure architect on a range of platforms, and final line of technical escalation for production issues.

- * Development and implementation of an IaaS Management System across all Amazon EC2 and Private Cloud hosted sites
- * Lead Infrastructure Architect:
 - 4oD on PS3, iOS, and Xbox 360 (winner of the IBC 2012 Innovation in Content Delivery Award)
 - Platform Re-architecture (to AWS)
 - 4Music 2011 Re-launch (<http://www.4music.com>)
 - Food Hospital (<http://foodhospital.channel4.com>)
 - Scrapbook (<http://scrapbook.channel4.com>)
 - Great British Property Scandal

- **FilmFlex (Film4oD, Virgin On Demand, hmvon-demand)** **London, UK**
Infrastructure Platform Owner *2009 - Present*
 FilmFlex is a UK Movies on Demand service. Acting as the internal infrastructure platform owner for this platform within KIT digital, and managing and maintaining the strategic platform architecture. During the tenure with FilmFlex, the platform has taken on three new affiliates, launched on mobile devices, and had a daily transaction rate increase of several orders of magnitude
- **SeeSaw.com / Project Kangaroo** **London, UK**
Various *2008 - 2010*
 Project Kangaroo was initially IPTV venture by the BBC, Channel 4 and ITV, later launched as SeeSaw.com. Worked first in the application support team, transitioned to primary project engineer, and lead the architecture of the data warehousing and reporting components.
- **FOXTEL** **Sydney, Australia**
Senior Engineer *2010*
 FOXTEL is an Australian premium television company. Originally joining the team to aid the implementation, travelled to Australia to provide technical assurance for meeting aggressive launch dates for the new FOXTEL on Xbox 360 platform
- **BBC Monitoring** **UK**
Senior Engineer *2009*
 BBC Monitoring is a commercial arm of the BBC, which provides signal intelligence across various data sources. ioko provided technical consultancy for the infrastructure and application deployments. Challenges included rapid deployment of a large estate, systems automation on Solaris 10, vast signal acquisition, multi-site fully redundancy with data replication (both ZFS and Oracle RDBMS)
- **Venda, Inc.** **London, UK**
Systems Administrator *Jul 2007 – Mar 2008*
 Venda, Inc. is the world's largest SaaS e-commerce provider for the world's leading retailers and manufacturers. Their PCI-DSS Tier One compliant platform handles hundreds of transactions per second across multiple sites.

 - Primary technical resource for the 2007 Christmas hardware refresh
 - Developed technical troubleshooting skills through first and second line support ticket work
 - Developed a strong knowledge of HTTP technologies, working with a complex transactional web delivery estate
- **aql** **Leeds, UK**
Systems Support & Software Development *2004 – 2006 (various)*
 aql are an award winning VoIP company based in the North of England. Working at aql, my responsibilities included dealing directly with clients to diagnose their needs and tailor a system to meet these. Whilst working at aql I acquired skills working with Asterisk (incl. Asterisk Realtime), SMS/MMS/WAP technologies, and both wired/wireless VoIP hardware/software systems.

 - Development of internal systems and toolchains
 - Implementation of Mobile Messaging (SMS/MMS/SMPP) and VoIP Systems (SIP) using Asterisk (incl. Asterisk Realtime)
 - First and second line support and ticket management

Voluntary

- **mySociety** **<http://mysociety.org>**
Systems Administrator *May 2010 - Present*
 mySociety's mission is to help people become more powerful in the civic and democratic parts of their lives, through digital means.

 - Co-ordinated and implemented datacentre migration
 - Improved site performance across the board through implementation of caching software
 - Provide technical guidance to mySociety developers on scaling and performance testing
 - Authored security and compliance policies
- **no2id** **<http://www.no2id.net>**
Systems Administrator *Feb 2010 - Present*
 no2id is a campaigning organisation formed in 2004, with an edict to help protect the privacy, civil liberties and personal safety of UK citizens.

- Improved monthly mailshot delivery reliability and completion speed
- On-going system administration and support

- **Open Rights Group**

Systems Administrator

<http://www.openrightsgroup.org>

Jul 2009 - Present

The Open Rights Group is an organisation which works to preserve and improve digital rights.

- Development of system architecture
- Facilitated a platform migration to allow redundancy and resiliency for all ORG Internet services
- On-going system administration and support

- **London Hackspace**

Director

<http://london.hackspace.org.uk>

Aug 2010 - Aug 2011

The London Hackspace is a community run hacker-space in central London. It provides a space where people who make things can come to share tools, skills and knowledge. I stood and was elected as a director in the first elections of the London Hack Space, standing for one term.
